

HCS Math Spiral 2020-21

Learning Period 4

February 1 – March 31

***Objectives:** Students should be able to evaluate simple algebraic expressions in one variable, add, subtract and multiply with negative integers, solve geometric problems using algebra.*

Daily independent review for students in grades 5 through 8.

The goal of HCS Math Spirals is to refresh students on past material and fill in key holes that have been identified by upper grade math teachers as problem areas for many students. Our hope is that students will work independently to complete one problem set per day (2-3 problems) either before or after their daily math lesson. These problems should not take more than 10 minutes to complete. If your student takes longer than this, make a note of the math concept, move on, and come back to the problem set once you've covered the subject in a math lesson. The Math Spiral is not to be used as a one-day worksheet; effectiveness comes in the habit of daily, brief review.

To refresh concepts that may not be addressed in your current math curriculum, one great resource is Khan Academy online found at www.khanacademy.org.

At the end of each learning period your Education Coordinator will have your student complete a short benchmark, in office, which will assess the concepts covered on the spiral they just completed.
